## **DETAILED ACTION**

### ***Response to Arguments***

1. Last OA mailed 1/9/08 is hereby incorporated by references.
2. Applicant's arguments filed 4/9/08 have been fully considered but they are not persuasive.

Re Claims 1-40, Applicant argues that a Mannette fails to disclose or suggest, "a media access controller" that schedule transmission to at least one reservation map. Applicant admits to the reference to the "reservation map". In particular, Mannette teaches that CMTS 200 stores this assignment in a database to track all channel assignments (for subsequent potential channel re-assignments, etc.) whereby a more efficient searching methodologies may be employed, such that a single search may be made of a database (transmit map and flow/reservation map,), with the single search extracting all needed information. This information is used by MAC 330 (See fig. 4: a media access controller) to perform the medium access control i.e. scheduling transmission of reception between the nodes.

Applicant further argues that the Mannette cannot remedy the deficiencies to Boroditsky to make the rejection *prima facie*. Mannette teaches that a single search can be employed to be more efficient searching of the database by using the transmit and reservation maps. The single search is the motivation to combine and not a hindsight reconstruction.
